CATALOG

LynDin's eco-friendly tableware is made from natural plant fibers derived from sugarcane. It decomposes within 90 days under natural conditions without harming the environment. The tableware is enhanced with food-grade water and oil-resistant formulations, meeting the needs of various dining scenarios, including dine-in, takeaway, and delivery. Suitable for a range of food establishments, such as fast food chains, coffee shops, and healthy dining venues.

Special Note:
The ability to withstand baking at 230 degrees mentioned in this manual refers to aviation ovens. Other types of ovens have not been tested, so please use with caution!!!

Nano-Scale Eco-Friendly Coatings

In our market research, we found that many eco-friendly materials share a common physical property: hydrophilicity. The current market practice is to apply coatings or laminations on the surface to prevent the seepage of water, oil, and liquids in foods like soups, which is a counter environmental process. Therefore, we proactively initiated this research and developed several eco-friendly coatings for various daily applications to achieve true environmental goals.

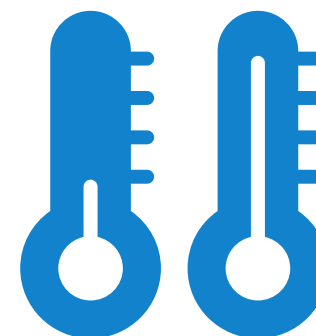

Nano Barrier Eco-Friendly Coating

Our developed nanometer eco-friendly coating effectively prevents sticking, and blocks water and oil with a 100% rate, perfectly replacing the counter-environmental coating or laminating processes in the market.

Nano Antibacterial Eco-Friendly Coating

Inhibits *Staphylococcus aureus* and *Escherichia coli* by 99.99%. Practically extends the shelf life of fresh produce and fruit cuts at room temperature, reducing waste. Additionally, it prevents secondary contamination of food containers during transit.

High and Low Temperature Resistant Nanometer Eco-Friendly Coating

Specifically developed for the aviation field, it meets the unique needs of airline food and pre-prepared meals, being able to withstand freezing at -90°C and baking at 255°C in airline ovens for 30 minutes.

Product FEATURES

Eco-Friendly

- Uses renewable resources, reducing reliance on fossil resources.
- Environmental protection, eliminating the burden and pollution from incineration and landfilling.
- Circular economy, avoiding resource waste and reducing ecological system damage.

Carbon Footprint Reduction by Over 90%

- Absorbs CO₂ during growth—negative emissions.
- Eco-friendly manufacturing process—no pollution.
- Naturally decomposes without residue no emissions.

Sustainable Development

- Uses renewable resources, reducing ecological damage. Natural decomposition reduces environmental pollution and pressure on waste management.
- Absorbs CO₂ during growth, reducing greenhouse gas emissions in the atmosphere.
